*Pharmacology in Rehabilitation*. Twenty-one lectures available via on-line streaming, containing approximately 18 hours of recorded material that address the primary drug classes and the physiologic basis of their action. Drugs are grouped according to their general effects and the type of disorders they are routinely used to treat. Special emphasis is placed on drugs that are commonly used to treat people receiving physical therapy. These lectures likewise address how drug therapy interacts with physical therapy, and how drugs can exert beneficial effects as well as adverse side effects that impact on rehabilitation. These lectures are marketed by RehabEssentials ([www.rehabessentials.com](http://www.rehabessentials.com)).
